Sabaragamuwa University of Sri Lanka

This project was designed to help students understand the importance of cleaning and protecting nature.

Through clean-up activities, tree planting, recycling, and environmental awareness campaigns, students learned how to care for plants, animals, water, and the land. The project also allowed students to spend time in nature and develop a stronger connection with their environment.

ECO SHIELD 2.0

The project focused on involving students in activities that promote nature conservation and environmental protection. They learned about the value of natural resources and the importance of protecting them for future generations. These activities helped create a clean and secure environment while encouraging students to become responsible and active protectors of nature.

GREEN TRAILS 3.0

This project aimed to develop students' knowledge and responsibility toward nature and the environment. Students were given opportunities to explore nature, identify environmental problems, clean polluted areas, and take part in tree-planting and recycling activities. They worked together to protect plants, animals, water, and public spaces from pollution and damage. The project successfully promoted teamwork and environmental awareness while helping to create a cleaner, safer, and more secure environment for everyone.
